CAREER VISION

As DevOps engineer with 5 years of experience, my role involves implementing and managing cloud Infrastructure and DevOps tools, collaborating with cross-functional teams, services to facilitate continuous integration, delivery, and deployment and staying updated with emerging technologies

SKILLS

- **Cloud Platforms:** Azure, AWS
- **Infrastructure Automation:** Bicep, Terraform, ARM Templates
- **CI/CD Tools:** Azure DevOps, GitHub Actions, Jenkins
- **Containerization:** AKS, Docker, Kubernetes
- **Programming Languages:** Python, Shell Script
- **Monitoring Tools:** Azure monitor, Grafana, Prometheus

WORK EXPERIENCE

AiDash System India (March 2021 to Present)

DevOpsEngineer

- Familiar with Agile methodologies, actively participating in Scrum-based DevOps sprints for faster and iterative cloud solution delivery.
- Automated cloud infrastructure provisioning using Azure Resource Manager (ARM) templates, Bicep, and Ansible, designing and managing Azure services like Virtual Machines, Virtual Network (VNet), Azure Blob Storage, Azure SQL Database, Azure Functions, Azure Active Directory (AAD), Virtual Machine Scale Sets, and Azure Load Balancer/Application Gateway for scalable and secure multi-region architectures.
- Built and optimized CI/CD pipelines using Azure DevOps, GitHub Actions, and Jenkins, automating build, test, and deployment stages to improve delivery speed, reliability, and consistency.
- Implemented backup and disaster recovery strategies using Azure Backup, Azure Site Recovery, geo-redundant storage (GRS), and cross-region failover to ensure high availability and business continuity.
- Applied DevSecOps and security best practices, including vulnerability scanning, patch automation, role-based access control (RBAC), Azure Policy, and Microsoft Defender for Cloud to enforce compliance across all environments.
- Configured monitoring and alerting systems using Azure Monitor, Log Analytics, Application Insights, along with Prometheus and Grafana, optimizing resource utilization through Azure Cost Management + Billing and Azure Advisor.
- Diagnosed and optimized system and network performance, resolving issues related to CPU, memory, disk I/O, and network latency in production workloads.

- Hands-on experience with containerization and orchestration tools such as Docker, Azure Kubernetes Service (AKS), and Azure Container Instances (ACI), deploying and managing microservices-based applications in scalable environments.
- Maintained comprehensive infrastructure documentation, including ARM/Bicep templates, configuration details, SSL certificate deployment and renewal procedures using Azure Key Vault, and detailed network architecture diagrams for Azure environments.
- Demonstrated strong analytical and troubleshooting skills with keen attention to detail, ensuring efficient issue resolution and maintaining highly available and stable production environments.

Sungeomatics Engineering Services (August 2019 to March 2021)

Junior LiDAR Engineer

- Data Collection and Processing: Capture, process, and analyze LiDAR data to create accurate 3D models, maps, and digital elevation models (DEMs) for various projects.
- Feature Extraction and Analysis: Classify and extract features (e.g., buildings, roads, vegetation) from LiDAR point clouds for use in engineering, surveying, and mapping applications.

Magnasoft System India (May 2018 to August 2019)

LiDAR Trainee Engineer

- Data Collection and Processing: Capture, process, and analyze LiDAR data to create accurate 3D models, maps, and digital elevation models (DEMs) for various projects.
- Feature Extraction and Analysis: Classify and extract features (e.g., buildings, roads, vegetation) from LiDAR point clouds for use in engineering, surveying, and mapping applications.

EDUCATION

Degree	Board	Passout Year
BSc Mathematics	Berhampur University	2018
+12 Science	CHSE, Odisha	2015
10 th	BSE, Odisha	2013

DECLARATION

I hereby declare that all the information furnished above is true to the best of my belief.

PLACE

Bangalore, Karnataka
